

# Ground Fault Notification

# POWER to Protect

## Ground Fault Notification

- Ground Fault Notification is an innovative system to alert you of any ground fault event in your marina: when a ground-fault circuit breaker trips, the originating pedestal will flash red until the fault has been cleared
- Helps identify problem slips and indirectly prevents electric shock drownings from increased awareness at the marina
- Compatible with all DBU Brand UL receptacles, breakers, relays, switches, and lighting components
- Goes one step further than NEC: visual representation provides peace of mind, letting you know that your marina is protected and your patrons are safe

## The Complete Solution

All power pedestals and distribution equipment are **UL listed**. The UL certification provides an industry leading level of product safety that your customers demand with peace of mind.

## Ground Fault Notification

A single red light immediately lets you know that your equipment is protecting your customers.
